

DATA ABSTRACTION

Over 15+ years of medical data abstraction and validation experience.

CHALLENGE: The Centers for Medicare & Medicaid Services (CMS) validates quality data reported by the nation's hospitals participating in the Medicare Hospital Compare program. To ensure accuracy and maintain HIPAA security of patient records, CMS needed a way to access, clinically evaluate, and report on a sampling of tens of thousands of paper medical records in a highly secure environment.

SOLUTION: To meet this need, Edaptive established its Clinical Data Abstraction Center (CDAC) dedicated to the processing and abstraction of medical records. Our services include: requests for medical records, receipt/storage of medical records, data abstraction, data entry, sampling coordination, validation of hospital data, and an Internal Quality Control (IQC) process for abstraction, tracking, liaison reporting functions, and modular system development.

Our facility is designed specifically to host the CDAC operations and features state-of-the-art security, environmental controls, efficient workspace, and storage.

Edaptive Systems' senior management team comprises proven data abstraction and validation veterans with mission support knowledge gained from years of hands-on experience. Our management team has supported the CDAC for more than 17 years.
